NEXXCHANGE

NEXXCHANGE & xTradeSoft

**NEXXCHANGE – THE FUTURE  
OF GOLF TECHNOLOGY**

## TWO STRONG PARTNERS UNDER ONE ROOF

Nexxchange is a technology enterprise that focuses on optimising commercial processes for the playing of golf. These include the administration of memberships, tournaments, POS cash register systems, tee time bookings and much more. Our software solutions for booking engine are certified by the Austria Golf Federation and the Italian Golf Federation and achieve high performance rates at low costs. The B2B solutions of Nexxchange are distinguished by the Software as a Service concept.

xTradeSoft GmbH, Vienna, is an Austrian subsidiary of Nexxchange. As an outsource-software inhouse development company, xTradeSoft is responsible for creating and implementing specific software solutions. Since 1994, xTradeSoft has been successful in software development around the world. The roster of customers include the stock exchanges in Kuwait and Lima, Peru, as well as securities brokerages in the Middle East. Structurally, both enterprises are connected under the Nexxchange roof.

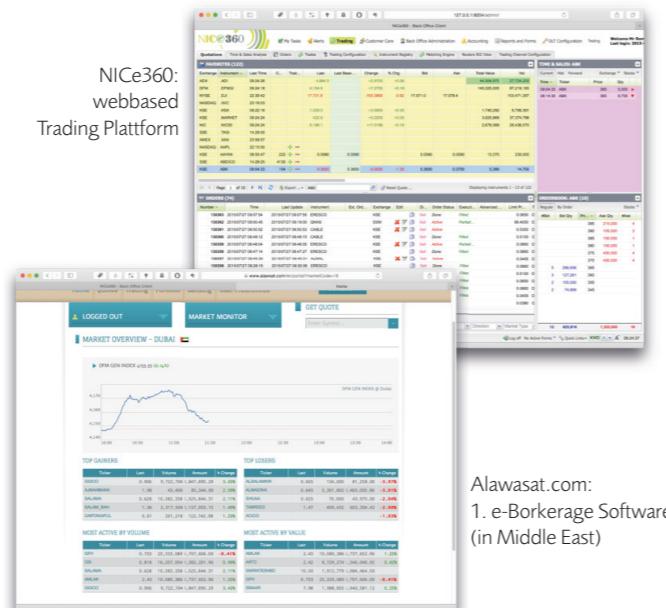

**NEXXCHANGE**

## YEARS OF EXPERIENCE WITH STOCK EXCHANGE SOFTWARE

xTradeSoft developed the Kuwait Automated Retrieval System (KARS), which provides market information in real time - thereby enabling investors to connect with the market. Based on customer demands, software with Linux, MS-SQL, Java and a graphical user interface from Microsoft Windows as components was built with a custom-made library.

For the Kuwait Middle East Financial Investment Company (KMEFIC), xTradeSoft created and implemented the first E-trading page, 'Alawsat.com', in 2000-2001. And for the National Investments Company (NIC), a fully operable E-trading solution was developed by xTradeSoft in 2008 and implemented in 2009.

Alawsat.com:  
1. e-Brokerage Software  
(in Middle East)

## FULL SECURITY, FULL SERVICE

International statistics show that SaaS (Software as a Service) is virtually fail-safe. Should an unlikely fault or error occur, we are completely prepared through our safety structure. The GolfSuite works behind the scenes with a guaranteed availability of 99.5% and a double mirrored database in two different data centers. Moreover, all customer data are saved by us every day on external hard-discs.

This cost-effective service by Nexxchange offers a wide range of benefits: Customer Relationship Management (management of members); management for plant operators; tee time online reservations; tournaments; POS; dynamic memberships and their handling, as well as agent modules (regional concept) and more.

## WE WORK ON THE FUTURE – NEXXCHANGE GOLF SUITE

As our name indicates – Nexxchange stands for Next Exchange – we are at the forefront of sophisticated IT solutions that provide for networking with the customers.

With the newest technologies, we work on our main target - establishing 'Hospitality 4.0' on the golf course - and to provide all of the business processes of the operator as fully integrated in a comprehensive solution. We simplify and automate business processes and enable the golf players and business partners to experience easily, for themselves, the user-friendly system with a responsive web design.

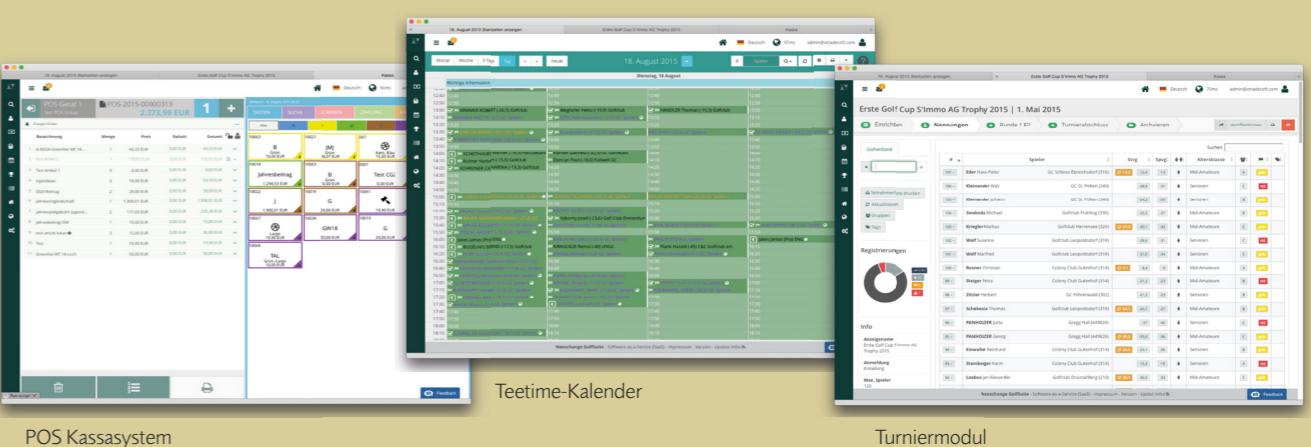

Rapidly increasing digitalisation presents new challenges for the leisure and tourism sector. Consolidated tee times for entire regions and special network offers in cooperation with hotel operators have a very bright future.

Our IT technologies establish appropriate standards, for example, with the modern regional-booking-portal. It allows businesses to not only manage their dynamic company memberships, but also to include hotels and travel agencies directly in the golf tee times booking process.

## WEB BASED AND FULLY INTEGRATED

Based on more than 20 years of experience with time critical applications for the stock exchange operations, xTradeSoft has been developing 'GolfSuite', the web based and fully integrated golf club management software, since 2012. Nexxchange offers software as a full service to golf clubs – to cover in one solution all of the process requirements. The Nexxchange GolfSuite takes over all applications related to golf club management.

Therefore, the purchase of databases and computer servers, and the buying of licenses or software updates is completely unnecessary. Internet access – whether via desktop, tablet or laptop - is the only requirement. The new user-based price model for the Suite lies far below the total costs of the other client-server providers.
